EDUCATION

DePaul University

B.S. in Mathematics and Computer Science

GPA: 3.88, Major GPA: 3.95

Chicago, IL

Sep. 2023 – Exp. June 2027

Stanford University

Visiting Student

Stanford, CA

Summer 2026

WORK EXPERIENCE

Software Engineer Intern

Airblox

Schaumburg, IL

June 2025 – Mar. 2026

- Built a reusable React component library from Figma designs (atoms, molecules, organisms) using Mantine and Storybook to support a full website redesign targeting end users.
- Developed production-ready components with configurable props, documentation, and Storybook stories, enabling consistent usage across the engineering team.
- Collaborated with design and engineering leads in an agile workflow, using Git/GitLab for PRs and code reviews and Jira/Slack for sprint planning, standups, and issue tracking.

Undergraduate Research Assistant

DePaul University, College of Science and Health

Chicago, IL

Jan. 2025 – Dec. 2025

- Modeled a Crab Nebula-inspired signal by rotating synthetic 2D point clouds and optimizing a kernel-based objective; implemented angle estimation via bisection and built an interactive `matplotlib` slider to explore angle dependence.
- Implemented and tested an AGD-Until-Guilty method (JAX) to certify convexity and surface counterexamples via witness pairs; evaluated behavior on convex and non-convex functions.

PROJECTS

NASA Asteroid Threat Classifier, Next.js, FastAPI, TensorFlow/Keras, Python, Railway

Apr. 2026

- Engineered a full-stack ML application that fetches live orbital data from NASA's NeoWs API to classify near-Earth asteroids as hazardous or safe using a custom-trained 3-layer neural network.
- Optimized model performance for rare-event detection using class weights and StandardScaler normalization, achieving high precision on historical NEO datasets and deploying via a containerized FastAPI backend.
- Developed a Next.js dashboard with Mantine to display real-time predictions, model confidence scores, and physical asteroid metrics through parallelized server-side API requests.

Master the Masters, Next.js, TypeScript, Prisma, Supabase (PostgreSQL), Mantine

Aug. 2025

- Built a centralized academic tracker for graduate school applications, featuring multi-tier organization, location-based grouping, and automated logo enrichment via external branding APIs.
- Architected a relational schema in Supabase to support complex CRUD operations, implementing soft-delete logic with reason-tracking and restore capabilities for data persistence.
- Designed a high-performance filtering system and responsive UI using Mantine components and Tailwind CSS to manage large datasets across desktop and mobile views.

Occasion, Next.js, TypeScript, Prisma, Clerk Auth, MySQL, Vercel

June 2025

- Developed a secure event management platform utilizing Clerk for session-synced authentication and middleware-protected routes to ensure per-user data isolation.
- Implemented rigorous server-side validation using Zod to prevent scheduling conflicts and enforce date restrictions across eight distinct event categories.
- Engineered a relational database layer with Prisma ORM to handle complex queries for event tracking, real-time status updates, and category-based filtering.

SKILLS

Programming Languages: Python, C++, C#, Swift, Java, JavaScript, TypeScript

Tools and Frameworks: Git, GitLab, React, Next.js, NumPy, TensorFlow, Tkinter, SQLite3, Figma, Storybook, Jira

CERTIFICATIONS

Machine Learning Specialization – Stanford University (Coursera, 2025)

AWARDS

Dean's List, DePaul University

Sep. 2023 – Present

Presidential Scholarship, DePaul University

Sep. 2023

LEADERSHIP/MENTORSHIP

Founding Treasurer, DePaul AI Club, DePaul University

Mar. 2026 – Present

Founding Treasurer, Turkish Student Association, DePaul University

Jan. 2025 – Mar. 2026

Student Mentor

Chicago, IL

Keystone Youth Center

Aug. 2022 – Present

- Mentor for middle school through college students, providing academic guidance, emotional support, and organizing programs that foster engagement and personal growth.
